

# Tuffline<sup>®</sup> Eco Slimline Lightbox

*a lighter choice!*

**Tuffline<sup>®</sup> Eco** slimline lightbox is the lightest slimline lightbox on the market. It also uses far less energy than all traditional slimline and standard lightboxes on the market today.

With our patented technology this lightbox maximises the light efficiency of the standard T5 tubes to give you brightly illuminated images using minimum power.

Utilising the patented **Tuffline<sup>®</sup>** framing system the change over of images is a breeze.

**Pick the box up and you realise that it is less than half the weight of other slimline lightboxes.**

Because there is no chunky piece of acrylic in the lightbox it dramatically reduces the weight of the unit. It also means that this box is not just using less power installed but also uses less petroleum based products (acrylics) in the manufacturing process.

**All of this adds up to a product that is cheaper to run and a far better environmental choice.**

The lightbox can be wall mounted or hung using our **ShopCable<sup>®</sup>** system.

It is also available as a freestanding unit ideal for shopping centres and alike.
